

**Trinidad** is the most southerly island of the Caribbean.

It is the most industrialized in the English speaking Caribbean. Our main exports are oil and gas. While tourism services and manufacturing are other active sectors. One other important area is our cultural expression in the form of our Carnival.

# Nationally Determined Contributions (NDCs) Overview

# Three NDCs of Trinidad and Tobago

Three main sectors identified to be addressed

Power Generation

Transportation

Industrial Sectors

- Emission by 2030  
To be reduced by (103,000,000 tonnes) Co<sub>2</sub>e.

Reduction of emission by 15 percent by the year 2030.

- Estimated cost of meeting the objective is 2 billion US. This will be achieved through the linkage with our Green Fund

clean plastics only

Plastikeep

unified communities + healthy environment

# The Green Fund

The Activities

# Progress Towards Meeting NDCs

# Government approach to meet the NDCs

by...

- At the level of the state the government intends to reduce public transport emissions by 30 % by 2030
- Works with private sectors to reduce emissions and the public
- Facilities and tax incentives provide for use of hybrid vehicles
- Last three decades upward trend in temperature impact on our coral reefs and our marine life
- Green fund partners with NGOs nationally to work with groups such as nature seekers and

Green Fund partners with NGOs to monitor the impact of warmer ocean on our Leatherback turtles

# Work and Contributions of the Youth

Through partnerships with NGOs,

Working with the Unesco Sandwatch Coastal Monitoring Programmes

Working with other groups at schools, engaging with school projects such as beach clean ups , project on impact on Coral Reefs with the warmer temperature.

Staying committed to the 2030 SDGs

Communicating with National Ministries

Staying committed to Unesco Club Activities

# Working With Mayaro Environmental Wave to monitor our coast through the Sandwatch Project

**Thank you**
